Analyse different types of servers using webalizer

Aim: To analyze different type of web server using webalizer web log analysis tool in fedora

objective:

* To understand web server log files
* To configure webalizers for server log analysis
* To analyze the number of visitor, requests pages, files and data transferred
* To compare the usage statistics of different web servers such as apache nginx and IIS

Procedure:

1. Install webalizer
   /var/log/apache2/access.log for Nginx
1. http://localhost/webalizer
2. Repeat same procedure for the log files of different servers.
3. View the report

the generated report can be opened in a web browser.

Result: The webalizers try successfully analyzes web server log files and statistical reports. The generated report can be used to compared the traffic, request visites resource usage and data transfer of different web servers

Output :

Summary by Month

Month	Visits	Pages	Files	Hits	kBytes
Jan 26	1250	3420	5210	7345	45820
Feb 26	1400	3915	5740	8120	52140
Mar 26	1635	4250	6210	8920	58660
Total	4365	11585	17160	24415	156620

Response Codes :

200	OK	21500
301	Moved Permanently	
404	Not found	1200
500	Server Error	15
